Adila Sadović

SENIOR PRODUCT DESIGNER / BERLIN, GERMANY

I design complex systems until they feel obvious.

Product designer with 15 years in design and 10+ years in product and UX, working across enterprise security, governance and cloud infrastructure. I use customer and operational evidence to frame product direction, align teams around complex problems, and shape reusable systems that can scale across products and teams.

FOCUS Enterprise security & governance	SYSTEMS State, permissions & policy models	PLATFORMS Cloud infrastructure & multi-account UX
SCOPE Problem finding product direction scale	LEVERAGE Cross-functional & multi-team influence	COLLABORATION Product, engineering & cross-product teams

01 EXPERIENCE

Current & recent experience

Senior Product Designer

Miro - Enterprise Guard / Content Security / Feb 2024 - Present

- Used recurring enterprise customer escalations to build the case for Security Mode and influence the stream heads of Product and Engineering to prioritise the problem.
- Sole product designer for Security Mode, partnering with a PM, engineering manager and ~15 engineers; defined the state, permission and interaction models connecting classification, protection, review, remediation and reclassification.
- Took the system from concept through a five-customer enterprise private beta, incorporated feedback into the product, and supported its move into public beta and Miro internal enablement after Security & Compliance review.
- Worked across Security & Compliance, Legal and customer-facing teams while designing broader Enterprise Guard capabilities including custom business-sensitive data discovery, prompt blocking, auto-classification and Microsoft Purview DSPM for AI integration.
- Created and piloted an executable design-engineering collaboration model using code-based prototypes, Git/PR review and production design-system components; now testing whether the model holds across different team structures and levels of Git fluency.

UX Designer · Senior UX Designer

Amazon Web Services - Systems Manager / Oct 2020 - Feb 2024 / promoted during tenure

- Sole designer for AWS Systems Manager Quick Setup, working with a PM, engineering manager and ~20 engineers from the original launch through platform evolution.
- Established an outcome-first “easy button” model using recommended defaults and progressive control to keep common setup simple without hiding what AWS would change.
- As Quick Setup expanded beyond Systems Manager, partnered closely with AWS Config and DevOps Guru, balancing service-specific customisation with a shared setup model that could scale across configurations.
- Partnered with the AWS IoT Greengrass design and engineering team to bring Greengrass core devices into the Systems Manager management model, enabling customers to operate edge devices alongside other managed infrastructure.

02 EARLIER EXPERIENCE

Design & product experience before AWS

Head UX Designer / Product Designer

Comtrade Fintech Unit / Sep 2018 - Sep 2020

- Led product design across web and mobile fintech products, balancing regulatory and business constraints with usability while working directly with product, engineering and stakeholders on broader product direction.
- Owned end-to-end UX and UI for launched products including OPA, Raiffeisen Mobile Banking and Link m; created and evolved design systems across projects.

Head UI/UX Designer

AgentLocator / Sep 2016 - Sep 2018

- Owned UX and UI for a real-estate CRM and website builder used by agents in Canada and the US.
- Designed workflows across lead management, listings, agent operations and website creation, working with stakeholders and analytics to improve usability and business outcomes.

Graphic Designer / Web Designer

Foto Art / Apr 2014 - Sep 2016

- Worked across branding, print, web design and CMS-based solutions, building the visual and production foundation for later product-design work.

Freelance Designer

Independent / 2011 - 2014

- Digital, web and brand design for freelance clients before moving into full-time agency and product roles.

03 SELECTED EVIDENCE

Systems, scale & craft

PATENT	US11799796B1 - Closed loop change management for cloud-based systems
	Named inventor. The work aligns with AWS Change Manager and controlled authorization, execution and scope/impact workflows in cloud systems.

PROBLEM FINDING Enterprise evidence product direction	SYSTEMS DESIGN States, permissions, policy & lifecycle models
PLATFORM STEWARDSHIP Shared patterns that survive partner-team growth	ENTERPRISE UX Admins, operators, multi-account & high-risk workflows
INFLUENCE Product, engineering, legal, security & customer teams	DESIGN × ENGINEERING Executable prototypes, PR review & decision records

04 SELECTED PRODUCT AREAS

Representative domains

Miro Enterprise Guard

Security Mode · Data Discovery · custom business-sensitive data discovery · Intelligent Guardrails · auto-classification · prompt blocking · Microsoft Purview DSPM for AI

AWS Systems Manager

Quick Setup · Application Manager · Fleet Manager · Change Manager · Patch Manager · Documents · cross-account operations

Fintech & SaaS

OPA · Raiffeisen Mobile Banking · Link m · real-estate CRM · website builder
